[account_id](#)

TEXT

Account ID

Breaks down reporting data by advertising company
Company ID. Can be used to filter by Company.id.
Compatible with any of the following report types:
Historical, Future sell-through, Reach, Ad speed.

[account_name](#)

TEXT

Account name

Breaks down reporting data by advertising company.
Company.name and Company.id are automatically included as columns in the report. Can be used to filter by Company.name. Corresponds to "Advertiser" in the Ad Manager UI. Compatible

[ad_exchange_line_item_average_ecpm](#)

PERCENT

Ad Exchange
average eCPM

The average estimated cost-per-thousand-impressions earned from the delivery of Ad Exchange ads for line item-level dynamic allocation. Compatible with the 'Historical' report type.

[ad_exchange_line_item_clicks](#)

NUMERIC

Ad Exchange
clicks

The number of clicks an Ad Exchange ad delivered for line item-level dynamic allocation. Compatible with the 'Historical' report type.

[ad_exchange_line_item_clicks_percent](#)

PERCENT

Ad Exchange
clicks (%)

The ratio of the number of clicks delivered to the total clicks delivered by Ad Exchange for line item-level dynamic allocation.

[ad_exchange_line_item_ctr](#)

NUMERIC

Ad Exchange
CTR

The ratio of clicks an Ad Exchange ad delivered to the number of impressions it delivered for line item-level dynamic allocation.

Compatible with the 'Historical' report type.

[ad_exchange_line_item_impressions_percent](#)

PERCENT

Ad Exchange
impressions (%)

The ratio of the number of impressions delivered to the total impressions delivered by Ad Exchange for line item-level dynamic allocation.

Represented as a percentage.

Compatible with the 'Historical' report type.

[ad_exchange_line_item_revenue](#)

NUMERIC

Ad Exchange
revenue

Revenue generated from Ad Exchange ads delivered

				zone. Compatible with the 'Historical' report type.
ad_exchange_line_item_revenue_percent	PERCENT	Ad Exchange revenue (%)	The ratio of revenue generated by Ad Exchange to the total revenue earned by CPM and CPC ads delivered for line item-level dynamic allocation. Represented as a percentage. Compatible with the 'Historical' report type.	
ad_exchange_line_item_revenue_percent_cpd	PERCENT	Ad Exchange revenue with CPD (%)	The ratio of revenue generated by Ad Exchange to the total revenue earned by CPM, CPC and CPD ads delivered for line item-level dynamic allocation. Represented as a	

[targeted_clicks](#)

targeted clicks

Exchange ad delivered for line item-level dynamic allocation by explicit custom criteria targeting. Compatible with the 'Historical' report type.

[ad_exchange_line_item_targeted_impressions](#)

NUMERIC

Ad Exchange targeted impressions

The number of impressions an Ad Exchange ad delivered for line item-level dynamic allocation by explicit custom criteria targeting. Compatible with the 'Historical' report type.

[ad_network_id](#)

TEXT

Ad network id

The network that provided the ad for SDK ad mediation. If selected for a report, that report will include only SDK mediation ads and will r

have a list of ad networks which can provide ads to serve. Not every ad network will have an ad to serve so the device will try each network one-by-one until it finds an ad network with an ad to serve. The ad network that ends up serving the ad will appear here. Note that this id does not correlate to anything in the companies table and is not the same id as is served by ADVERTISER_ID. Compatible with any of the following report types: Historical, Reach.

ad_server_all_revenue	NUMERIC	Ad Server All Revenue	The CPM, CPC and CPD revenue earned, calculated in publisher currency, for the ads delivered by the ad server. Can correspond to any of the following in the Ad Manager UI: Ad server CPM, CPC, CPD, and vCPM revenue, Ad server CPM, CPC and CPD revenue. Compatible with the "Historical" report type.
ad_server_clicks	NUMERIC	Ad server clicks	The number of clicks delivered by the ad server.
ad_server_ctr	PERCENT	Ad server CTR	The CTR for an ad delivered by the ad server.
ad_server_impressions	NUMERIC	Ad server impressions	The number of impressions delivered by the ad serv 

			targeting.
ad_unit_id	TEXT	Ad unit ID	The id of the ad unit.
ad_unit_name	TEXT	Ad unit name	The name of the ad unit.
adsense_line_item_level_impressions	NUMERIC	AdSense impressions	The number of impressions an AdSense ad delivered for line item-level dynamic allocation. Compatible with the "Historical" report type.
advertiser	TEXT	Advertiser	The name of the advertiser company assigned to an order.
advertiser_id	TEXT	Advertiser id	The id of the advertiser company assigned to an order.
campaign	TEXT	Campaign	Breaks down reporting data by placement. Placement.n and Placement.id are

			Placement.name. Corresponds to "Placement" in the Ad Manager UI. Compatible with any of the following report types: Historical, Future sell-through, Reach.
clicks	NUMERIC	Clicks	The number of clicks delivered by the ad server. Corresponds to "Ad server clicks" in the Ad Manager UI. Compatible with the "Historical" report type.
country	COUNTRY	Country	Country associated to IP address from ad slot request
creative_id	TEXT	Creative ID	The ID of the Creative that served to the ad slot request

creative_size	TEXT	Creative size	Size of creative that served to the ad slot request. Creative size does not represent the actual size of a creative being served.
creative_type	TEXT	Creative type	Type of creative that served to the ad slot request.

Cannot be used for filtering; When using this Dimension, metrics for freeform key values are only reported on when they are registered with CustomTargetingService. Corresponds to 'Key-values' in the Ad Manager UI. Compatible with any of 

			connector returning the row
date	DATE	Date	Breaks down reporting data by date in the network time zone. Can be used to filter by date using ISO 8601's format 'YYYY-MM-DD'. Note: In v201802 and later, this dimension is compatible with the following time zone types: TimeZoneType.PUBLISHER TimeZoneType.PROPOSAL_LOCAL Corresponds to "Date" in the Ad Manager UI. Compatible with any of the following report types: Historical, Future sell-through, Reach, Ad speed.

			AdSense ad delivered for line item-level dynamic allocation. Corresponds to "AdSense impressions" in the Ad Manager UI. Compatible with the "Historical" report type.
line_item_average_number_of_viewers	TEXT	Nielsen Average Number Of Viewers (Line item)	Corresponds to 'Nielsen Average Number Of Viewers' in the Ad Manager UI. Compatible with any of the following report types: Historical, Reach.
line_item_contracted_quantity	TEXT	Contracted quantity (Line item)	Represents the LineItem.contractedUnitsBought quantity for Dimension.LINE_ITEM_NAME.

			Ad Manager UI
line_item_cost_type	TEXT	Cost type (Line item)	Represents LineItem.costType for Dimension.LINE_ITEM_NAME. Can be used for filtering.
line_item_creative_end_date	DATE	Creative end date (Line item)	Represents a LineItemCreativeAssociation.endDateTime for a Dimension.LINE_ITEM_NAME and a Dimension.CREATIVE_NAME. Includes the date without the time.
line_item_creative_start_date	DATE	Creative start date (Line item)	Represents a LineItemCreativeAssociation.startDateTime for a Dimension.LINE_ITEM_I

			time.
line_item_currency_code	TEXT	Currency code (Line item)	Represents the 3 letter currency code for Dimension.LINE_ITEM_NAME.
line_item_delivery_indicator	TEXT	Line item delivery Indicator	Indicates the progress made for the delivery of the line item.
line_item_delivery_pacing	TEXT	Line item delivery pacing	Represents delivery rate type for the line item.
line_item_discount	TEXT	Discount (Line item)	Represents the Lineltem.discount for Dimension.LINE_ITEM_NAME. The number is either a percentage or an absolute value depending on Lineltem.discountType.

			Can be used for filtering.
line_item_external_id	TEXT	External Line Item ID	Represents LineItem.externalId for Dimension.LINE_ITEM_NAME. Can be used for filtering.
line_item_frequency_cap	TEXT	Frequency cap (Line item)	Represents LineItem.frequencyCaps as a comma separated list of 'FrequencyCap.maxImpressions per every FrequencyCap.numTimeUnits FrequencyCap.timeUnit' (e.g. '10 impressions every day,500 impressions per lifetime') for Dimension.LINE_ITEM_NAME.
line_item_goal_quantity	TEXT	Line Item Goal Quantity	The total number of impressions, clicks or d& 

			associated to the Creative that served to the ad slot request.
line_item_label_ids	TEXT	Line item label IDs	Represents LineItem.effectiveAppliedLabels as a comma separated list of Label.id for Dimension.LINE_ITEM_NAME.
line_item_labels	TEXT	Line item labels	Represents LineItem.effectiveAppliedLabels as a comma separated list of Label.name for Dimension.LINE_ITEM_NAME.
line_item_last_reconciliation_date_time	TEXT	Line item last reconciliation time	Represents the monthly last reconciliation date time of the line item for

		lifetime clicks	delivered over the lifetime of a Dimension.LINE_ITEM_NAME.
line_item_lifetime_impressions	TEXT	Line item lifetime impressions	The total number of impressions delivered over the lifetime of a Dimension.LINE_ITEM_NAME.
line_item_name	TEXT	Line item name	The name of the line item associated to the Creative that served to the ad slot request.
line_item_non_cpd_booked_revenue	NUMERIC	Line Item Non CPD Booked Revenue	The cost of booking for a non- CPD Line item name.
line_item_optimizable	TEXT	Line item Optimizable	Generated as true for Dimension.LINE_ITEM_N' which is eligible for

			for Line item name as a valuebetween 1 and 16. Can be used for filtering.
line_item_reconciliation_status	TEXT	Line item reconciliation status	Represents the monthly reconciliation status of the line item for Dimension.LINE_ITEM_NAME and Dimension.MONTH_YEAR.
line_item_sponsorship_goal_percentage	PERCENT	Sponsorship goal (%) (Line item)	The ratio between the goal quantity for Dimension.LINE_ITEM_NAME of LineItemType.SPONSORSHIP and the LINE_ITEM_GOAL_QUANTITY. Represented as a number between 0..100.

			Can be used for filtering.
line_item_type	TEXT	Line item type	Type of line item associated to the Creative that served to the ad slot request.
month	TEXT	Month	Number of the month
month_and_year	TEXT	Month and year	Breaks down reporting data by month and year in the network time zone. Can be used to filter on month using ISO 4601 format 'YYYY-MM'. Note: In v201802 and later, this dimension is compatible with the following time zone types: TimeZoneType.PUBLISHER TimeZoneType.PROPOSAL_LOCAL Corresponds to "Month and year" in the Ad Manager.

			Reach, Partner finance.
now	TIMESTAMP	Now	Current timestamp
order_delivery_status	TEXT	Order delivery status	Delivery status of the order. Not available as a dimension to report on, but exists as a dimension in order to filter on it using PQL. Valid values are 'STARTED', 'NOT_STARTED' and 'COMPLETED'. Compatible with any of the following report types: Historical, Reach.
order_id	TEXT	Order ID	The id of the Order associated to the line item linked to the Creative that served to the ad slot request.

			served to the ad slot request.
placement_id	TEXT	Placement ID	The id of the placement that currently includes an ad unit associated with an impression, click, or other event.
placement_name	TEXT	Placement name	Name of the placement that currently includes an ad unit associated with an impression, click, or other event.
programmatic_match_rate	PERCENT	Programmatic match rate	The number of programmatic responses served divided by the number of requests eligible for programmatic. Includes Ad Exchange, Open Bidding, and Preferred L

			address included in the ad slot request.
source	TEXT	Source	The name of the Windsor connector returning the row
spend	NUMERIC	Spend	The total CPM and CPC revenue generated by the ad servers including line item-level dynamic allocation. Corresponds to "Total CPM and CPC revenue" in the Ad Manager UI. Compatible with the "Historical" report type.
today	DATE	Today	Today's date
total_ad_requests	NUMERIC	Total ad requests	The total number of times that an ad request is sent to ⁺

[seconds](#)viewable
seconds

in seconds that specific impressions are reported as being viewable. Corresponds to "Total Active View Average Viewable Time (seconds)" in the Ad Manager UI. Compatible with the 'Historical' report type.

[total_eligible_impression
s](#)

NUMERIC

Total eligible
impressions

Total number of impressions that were eligible to measure viewability. Corresponds to "Total Active View eligible impressions" in the Ad Manager UI. Compatible with the 'Historical' report type.

[total_line_item_level_all
_revenue](#)

NUMERIC

Total Line Item
Level All

The total CPM, CPC and CPO revenue generated by t

			following in the Ad Manager UI: Total CPM, CPC, CPD, and vCPM revenue, Total CPM, CPC and CPD revenue. Compatible with the "Historical" report type.
